Fire Safety Conclusion

CHAPTER

01

*Choose A Safe  
Location*

01

# Choose A Safe Location

---

## CHECK YOUR SURROUNDINGS

- Select an appropriate area for your fire. It should be away from flammable materials, in a fire pit or designated fire area if possible.

CHAPTER

02

*Gather Necessary  
Supplies*

# Gather Necessary Supplies

---

## SUPPLIES NEEDED

- Firewood: Collect dry, seasoned wood of various sizes (small twigs, larger branches, and logs).
- Tinder: Gather easily flammable materials like dry leaves, newspaper, or dry grass to start the fire.
- Kindling: Small sticks or wood pieces to help ignite the larger logs.
- Fire starters

CHAPTER

03

*Prepare the Fire Pit*

# Prepare the Fire Pit

## PREPERATION

- Clear the area from any debris or flammable materials.
- Build a ring using stones or a metal fire ring to contain the fire. Or use a Solo Stove.

CHAPTER

04

*Create a Fire Lay*

## FIRE LAY

- Place the tinder in the center of the pit.
- Surround it with a teepee or crisscross pattern of kindling.
- Or lay fire starters - paper - then small sticks(twigs) - small blocks wood - a couple larger pieces

CHAPTER

05

*Light the Fire*

## IGNITION

- Use matches or a lighter to ignite the tinder. Hold the flame to the base of the tinder until it catches fire.

CHAPTER

06

*Feed the Fire*

# Feed the Fire Gradually

---

## FEEDING

- Once the tinder catches fire, add small sticks or kindling to build the flames.
- Gradually add larger pieces of wood as the fire grows stronger.

CHAPTER

07

*Maintain the Fire*

---

## MAINTANENCE

- Keep an eye on the fire and add wood as needed to maintain the desired size and heat.
- Don't overload fire

CHAPTER

08

*Extinguish the Fire  
Safely*

# Extinguish the Fire Safely

---

## EXTINGUISHING

- When you're done, let the fire burn down to ash.
- Pour water over the fire or sand and stir the ashes to ensure everything is fully extinguished.
- Feel the ashes and surrounding area to ensure no residual heat remains.
- If using Solo Stove just let fire go out naturally if possible.

---

## **FIRE SAFETY IS IMPORTANT**

- Remember, fire safety is crucial. Always have a water source nearby to extinguish the fire if needed. Never leave a fire unattended, and be aware of any fire regulations or restrictions in your area.
